Review of chub mackerel fishery in China and research activities

China

Heng Zhang

Contents

- 1. Introduction**
- 2. Description of chub mackerel fishery in China in the north pacific ocean**
- 3. Fisheries data collection and research activities**

1. Introduction

Chub mackerel (*Scomber japonicus*) widely distributes in the Pacific Ocean.

Specially, the North Pacific Ocean and East China Sea are both important fishing ground areas for this population.

Recently, the CPUE of the species is decreasing.

light-purse seine

In 2023 year, China has two types of fishing nets operated in this fishery including the light-purse seine nets(>96%) and pelagic trawl nets(<3%).

Trawl nets — **Pelagic trawling**

From one to three trawl vessels were operated in NPFC areas, every year. In 2023, Three vessels seasonally catch the chub mackerel fishery in the NPFC areas which mainly within September-December.

2. Description of chub mackerel fishery in China in North Pacific ocean

Fishing effort and catch

	A	B	C	D
1	Year	Total Catch (tons)	Purse seine catch (tons)	Trawl fleet catch(tons)
2	2015	125,965	114473.7	11491.2
3	2016	125,835	105904.00	20550.64
4	2017	146,240	Number of vessels	
5	2018	113,489	China	
6	2019	57,284	Year	Purse seine
7	2020	78,403		Pelagic trawl
8	2021	101,770		CA
9	2022	83,142		NW
	2023	Estimate about 71,000 tons for mackerels		CA
			2022	105
			2021	105
			2020	51
			2019	29
			2018	62
			2017	75
			2016	82
			2015	78

2023 year, about 95

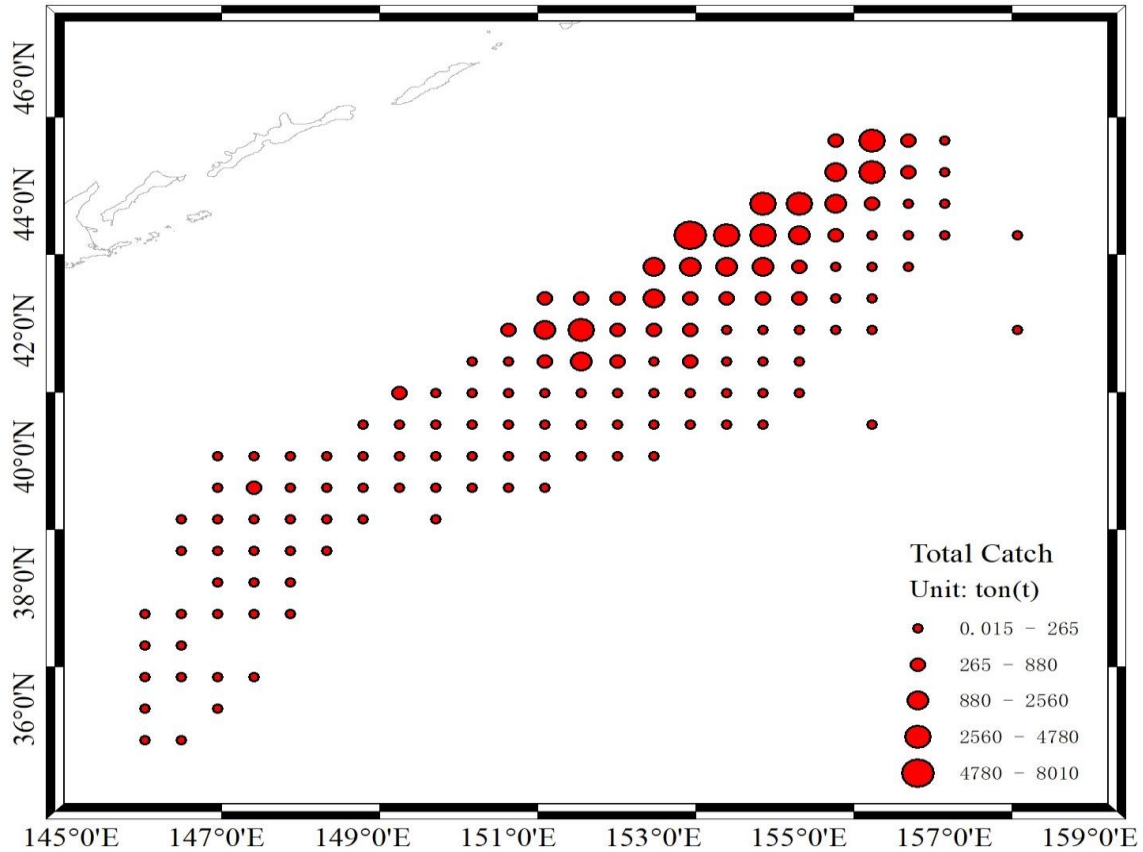

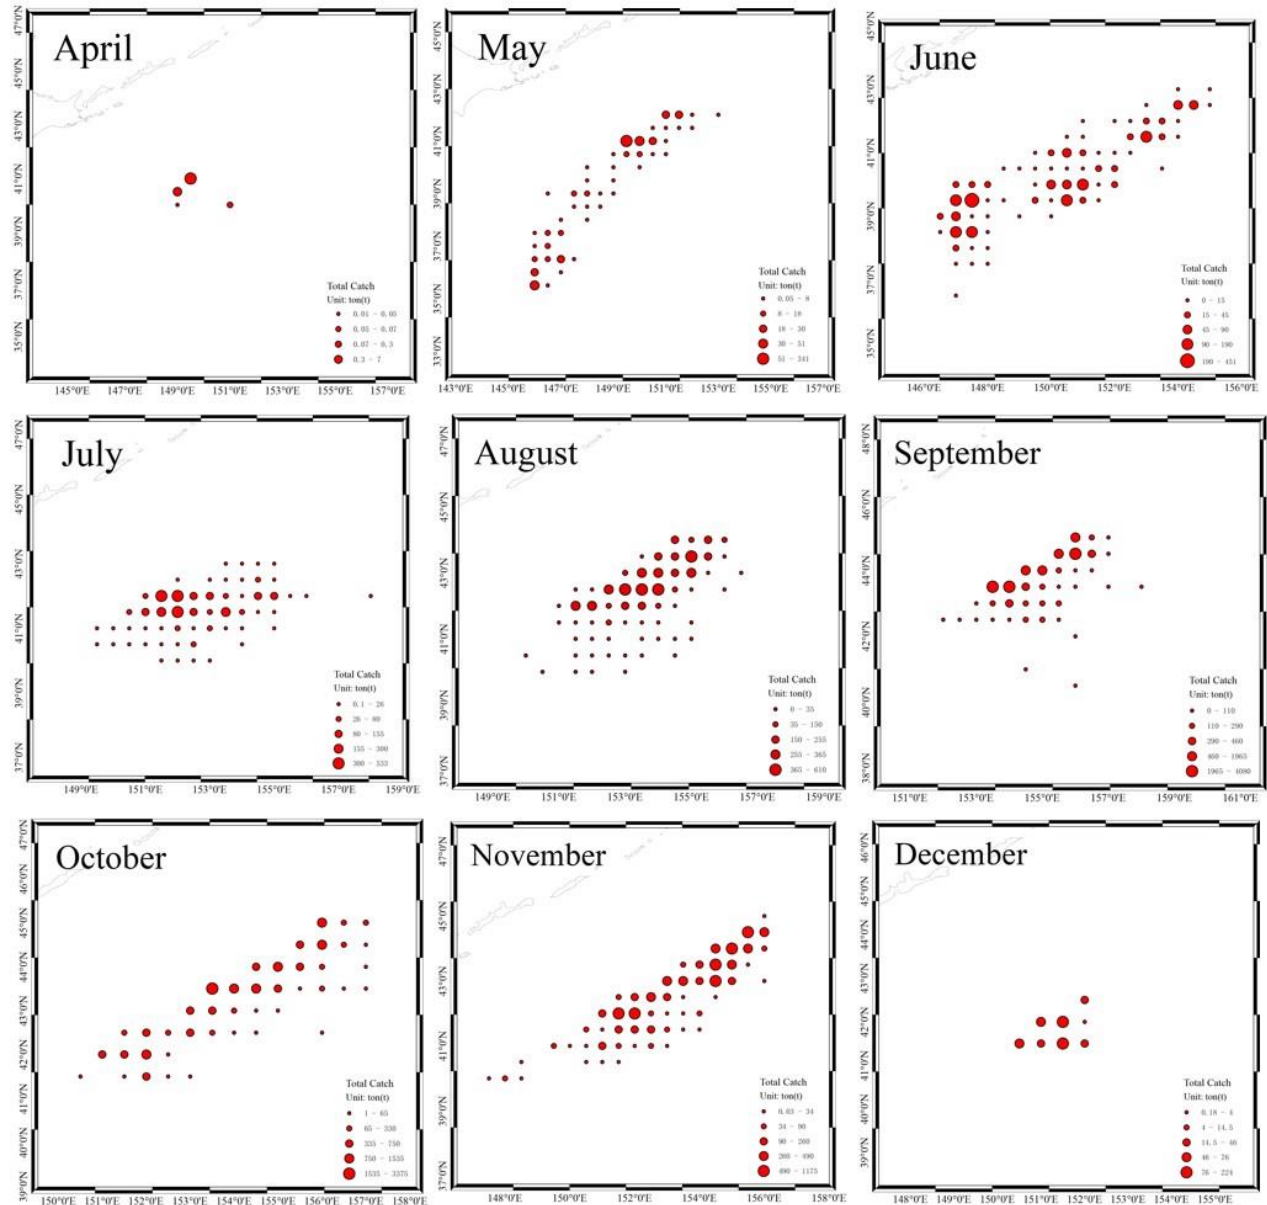

Figure Distribution on the catch (tons) of chub mackerel in China in 2022

The distribution on the chub mackerel is likely with 2022 year

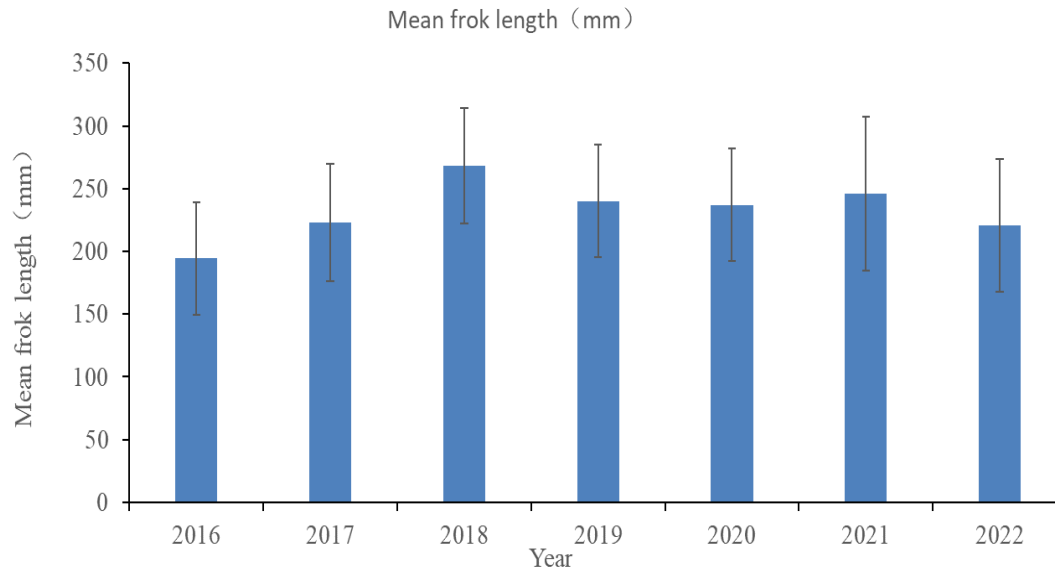

Distribution on the monthly catch of chub mackerel in China in 2022

The data for 2023 is currently being organized

3. Fisheries data collection and research activities

- Population biology

In 2022, the average length was 221.1mm. It can be seen that the average fork length presents a trend of gradual increase to stability in 2016-2021. In 2023, the average length was 231.1mm, which is a little larger than that in 2022.

- Relation between weight and fork length

Length-weight relationship of China' chub mackerel in 2022

Samples size-random sampling in boats or ports

Table 1 Sample sizes of length measurements

Year	month	samples	individuals
2016	August to November	8	254
2017	May to November	15	842
2018	April to October	14	345
2019	April to November	16	869
2020	April to December	18	1263
2021	April to November	23	795
2022	April to December	25	1483

Table 2 Sample sizes of age determination

Year	month	samples	individuals
2017	December	2	40
2018	April to October	14	260
2019	April to November	16	469
2020	April to December	18	322
2021	April to November	23	255
2022	April to December	25	235

Chub mackerel

The first dorsal fin has 9-10 fin spines

Almost no spots

Chub mackerel

The first dorsal fin has 10-13 fin spines

Black or blue spots

Blue mackerel

How to Identify Chub Mackerel and Blue Mackerel ?

Biological and Aging method

- Fork length (mm), weight(g)
- Maturity: The maturity of gonads is divided into I-V Phase by visual observations. **Phase III as a sign of maturity.** Phase III: Individuals whose gonads are maturing. The gonads are already well-developed, and the ovarian volume increases, accounting for 1/3-1/2 of the entire abdominal cavity. The naked eye can clearly see that the ovaries are filled with opaque slightly white or light yellow egg granules.
- Maturity at age: 0-1⁺ age individuals are not maturity, 2⁺ age individuals at least 30~40% have matured, 3⁺ age individuals are almost matured, larger than 4 age are 100% maturity. The situation varies every year.

Aging- otolith age rings reading method

Table 4 Sample sizes of age determination

Year	month	samples	individuals
2017	December	2	40
2018	April to October	14	260
2019	April to November	16	469
2020	April to December	18	322
2021	April to November	23	255
2022	April to December	25	235

In 2023, we increased the number of otolith measurements to 500+

no more larger size samples

Weight at age

There are somewhat differences in weight among different age groups

	A	B	C	D	E	F	G	H	I	J
1	Year	Quarter/age	0	1	2	3	4	5	6	7+

Fewer samples from the older age group

In 2022, weight at age become larger than early years

Catch or number at age

In 2022, the main individuals at age range from 1+ to 3+

Research activities and training

- ◆ Collection and analysis of all fishing logbooks every year
- ◆ Research Specialist Staff went to fishing vessels or in the ports to collect the samples data
- ◆ Monitor the monthly ratio of chub and blue mackerel catch
- ◆ Biological feature monitoring

- Starting from 2023, we have increased sample collection for large pelagic trawl nets in the North Pacific.
- The fork length frequency in trawl nets is very similar to the purse seine fishery, with very little difference. Further analysis is needed.
- It should be noted that chub mackerel and sardine are both target species in China's fisheries. In fact, fishermen prefer to catch chub mackerel because of its slightly higher price.

• Thank you very much!
